### DETAILED ACTION

Any rejection of record in the previous action not addressed in this office action is withdrawn.

The following is a new grounds of rejection:

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6, 9-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The rejection is based on the Guidelines for the Examination of Patent Applications under the 35 U.S.C. 112, first paragraph "Written Description published in the Federal Register (Volume 66, Number 4, Pages 1099-1111). Claim 1 is drawn to a vector comprising a first and second associating agent encoding sequence fused to or comprised with an Ig-presenting polypeptide encoding region, and an Ig polypeptide encoding region. The specification has defined the term "an associating agent" as an agent that can bring about the interaction between expressed Ig-presenting and Ig-polypeptides (page 12). Claims 1-6 and 9-19 are genus claims in terms of vectors

comprising any agent which can cause the interaction between these two polypeptides. The disclosure is not deemed to be descriptive of the complete structure of a representative number of species encompassed by the claims as one of skill in the art cannot envision all the molecules which would have this ability. While the specification discloses that cysteines that are available for the formation of an intermolecule disulphide linkage as associating agents, there is no disclosure of further types of molecules which would be functional. One could not predict or envision other types of molecules having similar functions. Therefore, the specification does not describe the claimed vector comprising association agents in such full, clear, concise and exact terms so as to indicate that Applicant has possession of the vector at the time of filing the present application. Thus, the written description requirement has not been satisfied.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 and by dependence claims 2-19 are vague and indefinite in the recitation of "a...vector construct comprising...a first associating agent fused to or comprised within said Ig-presenting polypeptide; and a second associating agent fused to or comprised within said first Ig polypeptide" since it is clear whether applicant intends that the vector comprises a nucleotide sequence which **encodes** the first and second

associating agent, or whether the vector comprises nucleotide sequences which are the first and second associating agents. The claim recites that the vector comprises the agents, but the claim also recites that the agents are fused to or comprised within polypeptides. Therefore the intended subject matter is unclear.

### ***Conclusion***

No claims are allowed.
